

NYKAA BEAUTY STORE MANAGEMENT SYSTEM

Chapter - 2

2.0 Introduction:

Designing a database begins with identifying the main entities, their attributes, primary keys, and the relationships between them. In the Nykaa Beauty Store Management System, entities represent the important objects such as Customer, Product, Category, Order, Order Item, Payment, Delivery, and Admin. Each entity contains attributes that describe its details, while primary keys uniquely identify each record. The relationships between entities help maintain data integrity, avoid redundancy, and ensure efficient data storage and retrieval.

2.1 Entity: Customer

Attribute	Key Type
Customer_ID	Primary Key
Customer_Name	-
Email	-
Phone_Number	-
Address	-
Password	-

Entity: Brand

Attribute	Key Type
Brand_ID	Primary Key
Brand_Name	-
Brand_Description	-

Entity: Category

Attribute	Key Type
Category_ID	Primary Key
Category_Name	-
Category_Description	-

Entity: Product

Attribute	Key Type
Product_ID	Primary Key
Product_Name	-

Brand_ID	Foreign Key
Category_ID	Foreign Key
Price	-
Stock	-
Product_Description	-

Entity:Order

Attribute	Key Type
Order_ID	Primary Key
Customer_ID	Foreign Key
Order_Date	-
Total_Amount	-
Order_Status	-

Entity:Order_item

Attribute	Key Type
Order_Item_ID	Primary Key
Order_ID	Foreign Key
Product_ID	Foreign Key
Quantity	-
Unit_Price	-

Entity:Payment

Attribute	Key Type
Payment_ID	Primary Key
Order_ID	Foreign Key
Payment_Method	-
Payment_Status	-
Payment_Amount	-

Entity:Review

Attribute	Key Type
Review_ID	Primary Key
Customer_ID	Foreign Key
Product_ID	Foreign Key
Rating	-

Review_Text	-
Review_Date	-

Entity:Shipment

Attribute	Key Type
Shipment_ID	Primary Key
Order_ID	Foreign Key
Shipment_Address	-
Shipment_Status	-
Shipment_Date	-
Delivery_Partner	-

2.2 Relationship Table

Relationship	Cardinality	Description
Customer → Order	One-to-Many	One customer can place multiple orders.
Customer → Review	One-to-Many	One customer can write multiple reviews.
Brand → Product	One-to-Many	One brand offers multiple beauty products.
Category → Product	One-to-Many	One category contains multiple beauty products.
Order → Order_Item	One-to-Many	One order contains multiple order items.
Product → Order_Item	One-to-Many	One product can appear in multiple order items.
Product → Review	One-to-Many	One product can receive multiple customer reviews.
Order → Payment	One-to-One	Each order has one payment record.
Order → Shipment	One-to-One	Each order has one shipment record.

2.3 Conclusion:

The Nykaa Beauty Store Management System database is designed with well-defined entities, primary keys, foreign keys, and relationships to manage customer, product, brand, category, order, payment, review, and shipment information efficiently. The database structure minimizes data redundancy, maintains data integrity, and ensures smooth operation of the online beauty store. This design provides a strong and reliable foundation for implementing the Nykaa Beauty Store Management System.
